EXPERIENCE

Founding Full-Stack AI Engineer

Jul 2026 – Present

Nomara USA

Atlanta, GA (Remote)

- Sole engineer on Nomara's multi-tenant agency platform (React/TypeScript, Supabase/Postgres), working directly with the founders on architecture and product decisions.
- Ran a security hardening initiative: 26 dedicated fixes closing 35+ vulnerabilities, including an unauthenticated account-takeover flow, cross-tenant RLS data leaks, and multiple privilege-escalation paths.
- Cut route bundle sizes up to 92% (324KB → 26KB) via code-splitting and lazy loading across 4 major routes.
- Traced a recurring cloud storage cost problem to a duplication bug in the archive pipeline rather than a provider issue, averting a proposed multi-month AWS migration and cutting retention costs 50% with a scoped fix shipped in days.
- Shipped an OAuth-based auto-publish pipeline (Meta/TikTok/YouTube) with approval-gated posting from the content calendar.
- **Tech:** Next.js, React, TypeScript, Supabase, PostgreSQL, RLS, Playwright, Vitest, Tailwind CSS

Full-Stack Developer (Freelance)

Apr 2026 – May 2026

Bunny's Cafe

- Sole developer on a paid client engagement: gathered requirements directly from the cafe owner and delivered a production ordering system end-to-end, covering design, development, deployment, and handoff.
- Built QR-code table entry, phone OTP authentication behind a rate limiter, real-time order-status tracking (Server-Sent Events with Web Push fallback), an admin dashboard, Razorpay payments, and Cloudinary image management.
- Result: 35% lift in checkout completion after launch.
- **Tech:** Next.js, TypeScript, Prisma, PostgreSQL, Firebase Auth, Razorpay, Cloudinary, Tailwind CSS

Android Platform Developer (Open Source)

2021 – 2022

CipherOS

- Maintained official custom Android ROM builds for the Redmi S2/Y2 (ysl) from AOSP source, covering kernel compilation, device-tree configuration, and upstream patch integration; shipped releases averaging 2,500+ downloads each.
- **Tech:** AOSP, Android Framework, Linux Kernel, Device Trees, Jenkins, Bash Scripting

PROJECTS

Solvo – Embeddable AI Support Widget

solvochat.com

- Built a full RAG pipeline (Gemini embeddings + pgvector) so any website adds one script tag and gives visitors instant, source-cited answers pulled from its own docs.
- Chunked documents at 400 words with 50-word overlap, embedded with Gemini, stored in pgvector; every answer cites its source chunk for verifiable trust.
- Result: 90% query relevance accuracy, answers returned in under 2 seconds.
- **Tech:** Next.js 16, TypeScript, Prisma, PostgreSQL + pgvector, NextAuth, Gemini 2.5 Flash, Tailwind CSS v4, Vercel

nekopet – Wayland Desktop Pet

[GitHub](#)

- Built a Wayland desktop pet in Rust that implements the wlr-layer-shell protocol directly, reading raw keyboard events from /dev/input and rendering sprite animations via shared-memory buffers.
- **Tech:** Rust, Wayland (wlr-layer-shell), smithay-client-toolkit, Linux /dev/input

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Rust, C++, C, HTML, CSS

Frameworks: Next.js, React, Express, Prisma, Node.js, Tailwind CSS, Framer Motion

AI / ML: Gemini API, RAG Pipelines, pgvector, LLM Integration

Databases: PostgreSQL, Supabase, MongoDB

Tools: Git, GitHub, GitHub Actions, Playwright, Vitest, Jenkins, Bash, VS Code, Linux, Vercel, GCP, Microsoft Azure

EDUCATION

Chandigarh University

Bachelor of Computer Applications

Punjab, India

2023 – 2026
